► RELEVANT EXPERIENCE

Charlie Health · past 4 years Remote

Charlie Health is the nation's leading virtual provider of high-acuity behavioral healthcare.

— Staff Platform Engineer March 2026 → Present
— Lead Software Engineer September 2023 → March 2026
— Senior Software Engineer February 2022 → September 2023

Joined as the first engineer and helped grow the team to 50+, recently moving from product eng to platform. Highlights:

- Designed and built the foundational scheduling stack — appointment booking, group scheduling, and staffing — when these were missing pieces of the product. Have led its evolution since, most recently through an overhaul of the core appointment data model.
- Diagnosed our ETL-based sync of core client data as the root cause of our most costly outage, then designed and led the rollout of an event-driven replacement. Executed a dual-write migration with no incident, removing a major single point of failure and cutting data latency from 5+ minutes to seconds.
- Designed a service backed by an eagerly-populated cache to isolate our most critical workflow (clients joining their group sessions) from core system outages, cutting peak load on the main DB by ~50%.
- Set the technical strategy for consolidating our split monolith into a single application; authored the migration plan and am leading the execution.

Top code reviewer and documentation contributor in the org throughout my tenure.

Buoy Health · 2 years Remote

Buoy built digital tools to help people make good decisions about their health.

— Lead Software Engineer July 2021 → February 2022
— Senior Software Engineer June 2020 → July 2021

Lead engineer on the team that directed people to the most relevant healthcare providers. Worked across the stack on new user-facing features and products, and drove adoption of automated testing and static analysis as the engineering org grew.

SmarterTravel · 4 years Boston, MA

SmarterTravel was a TripAdvisor subsidiary that operated a network of travel-content sites and the leading travel ad network.

— Integration Engineer → Software Engineer May 2016 → May 2020

Started on the syndication team writing partner integrations and subsequently contributing across the stack. Moved to the sites team, where I led an incremental React/TypeScript modernization of the frontend and worked across our Spring Boot services, data pipelines, CI, and a migration to AWS.

Cornerstone Research · 4 years Boston, MA

Cornerstone is an economic consulting firm supporting expert witnesses in commercial and financial litigation.

— Analyst → Senior Analyst → Research Associate Jan 2012 → Jan 2016

I managed teams of analysts running statistical, economic, and financial analyses. This is where I first learned I loved to code.
